Dayton Freight Lines Selects OPEN SCAN®

Denver, CO – August 27, 2009 – Dayton Freight Lines, Inc., headquartered in Dayton, OH, is the newest user of Open Scan Technologies, Inc.'s Corporate Accounts Receivable (A/R) Processing Software. Dayton Freight Lines is a less-than-truckload (LTL) carrier operating in 11 states in the North-Central US. (LTL carriers consolidate freight from multiple shippers into a single truckload.) The company operates a fleet of about 900 tractors and 2,000 trailers from a network of more than 40 terminals. Outside its home territory, Dayton Freight offers service in the rest of the US, Canada, Puerto Rico, and Guam through alliances with other carriers.

Dayton Freight adds to OPEN SCAN's well established presence in the LTL and total load industries. The intermodal transportation industry is a key indicator of the health of the economy. "After the 2008 rise in fuel prices and subsequent drop in transportation business, many transportation companies explored new technologies that would enable them to run leaner and more efficiently, to reap the benefits of automation as the economy rebounds. OPEN SCAN helps carriers do just that," said Nadine Lange, OPEN SCAN President and CEO. OPEN SCAN's solution provides greater control, higher autopost hit rate, faster cash application, integrated deduction identification, and more efficient and timely collections.

OPEN SCAN's proven Corporate A/R solution not only automates the cash application process for carriers, but it enables them to deposit funds electronically, archive payment documents electronically, and prepare for growth without adding headcount.

###

About OPEN SCAN

Open Scan Technologies, Inc. (OPEN SCAN®) develops enterprise receivables automation software for corporations. The software addresses the entire receivables function from image and data capture through remittance processing and receivables matching, to deduction / dispute resolution, to cash application. Corporations, financial institutions, and government agencies that receive either electronic or paper payment and remittance documents realize the highest levels of automation, data accuracy and operational savings for their receivables processing environments.
